HND ATIS	120.77
HND ASRI	131.575
HND Unicom	122.95

HND ARRIVAL PROCEDURES

Refer to the NOTAM for detailed information.

- For ATC efficiency and planning purposes, flight plans should be filed at least 12 hours, but not more than 22 hours in advance of planned departure time (by filing early you can significantly reduce your risk of excessive delays if a ground delay program is in effect)

- The FAA may utilize traffic management initiatives such as a ground delay program or miles in trail when arrival demand is expected to approach or exceed airport capacity. If a ground delay program is implemented, operators can expect to receive an Expect Departure Clearance Time (EDCT). Aircraft assigned an EDCT will be expected to depart within 5 minutes either side of the assigned time.

- Aircraft destined to Henderson Executive capable of utilizing an RNAV arrival procedure should file the following RNAV procedure predicated on direction of flight.

- From the NW – ADDEL ONE
- From the NE – NOOTN ONE
- From the SE – KNGMN TWO
- From the SW – JOMIX ONE

- Monitor ATIS (120.77) prior to initial call.

- DO NOT STOP ON ACTIVE RUNWAY. Expeditious clearing of the runway is essential.

- Utilize the first available exit unless otherwise instructed.

- Contact Ground Control on frequency 127.8 when instructed by the Tower Controller.

- VFR arrivals should contact the tower at least 10 miles from the airport. Follow the tower controller's directions for pattern entry, sequencing or holding instructions.

- Parking reservations are required between November 13-21, 2015 and can be obtained thru the FBO.
